Earth. In spite of all the huge problems with this idea, in the future NASA intends to look for homochiral molecules on a comet (and possibly on Mars). However, amino acids in meteorites have been shown to be ‘racemic’ (a 50:50 mix of both forms).

This huge expenditure of tax dollars is all based on fervent faith in evolution, and rejection of the obvious — that the machinery of life was originally created in a fully-functioning state.
